

## Table of Contents

<b>1.</b>	<b>Ionizing Radiation and What It Does in the Body</b> .....	<b>1</b>
	References .....	7
<b>2.</b>	<b>Radiation Fields and Their Statistics</b> .....	<b>9</b>
	Fluence and Fluence Rate .....	10
	Energy Fluence and Energy Fluence Rate .....	11
	Angular Distributions .....	12
	Energy Distributions .....	14
	References .....	15
<b>3.</b>	<b>Photon Interactions</b> .....	<b>17</b>
	Cross Sections and the Attenuation Coefficient .....	18
	Terma, Kerma, and Collision Kerma .....	21
	Dose Definition .....	25
	Narrow and Broad Beam Geometry of Photons .....	26
	References .....	28
<b>4.</b>	<b>Photoelectric Effect</b> .....	<b>29</b>
	Differential Cross Section for Photoelectric Effect (K-shell) .....	31
	Fluorescent Photons and Auger Electrons .....	32
	Mass Energy Transfer Coefficient for the Photoelectric Effect .....	34
	References .....	35
<b>5.</b>	<b>Compton Scattering Effect</b> .....	<b>37</b>
	Differential Cross Section for Compton Effect .....	38
	Differential Cross Section Relative to Recoil Electron Energy .....	40
	Mass Energy Transfer Coefficient for the Compton Effect .....	41
	Binding Energy Correction for the Klein–Nishina Cross Section .....	42
	References .....	42
<b>6.</b>	<b>Pair (and Triplet) Production Effect</b> .....	<b>43</b>
	Pair Production .....	44
	Cross Section for Pair Production .....	44
	The Similarity between Pair Production and Bremsstrahlung .....	45
	Triplet Production .....	46
	The Triplet Production Cross Section .....	47
	Positron Annihilation in Flight .....	47
	References .....	48
<b>7.</b>	<b>Other Photon Interactions and Summary</b> .....	<b>49</b>
	Rayleigh (Coherent) Scattering .....	49
	Photonuclear Interactions .....	49
	Relative Importance of Each Interaction Type .....	51
	Total Cross Sections (or Coefficients) .....	51
	Cross Sections for Compounds and Mixtures .....	52
	References .....	53

<b>8.</b>	<b>Charged Particle Interactions with Matter .....</b>	<b>55</b>
	Interactions of Heavy Charged Particles.....	55
	Stopping Power and Mass Stopping Power .....	56
	Collisional Mass Stopping Power for Heavy Charged Particles.....	57
	Soft Collision Mass Stopping Power for Heavy Charged Particles.....	59
	Hard Collision Mass Stopping Power for Heavy Charged Particles.....	60
	Shell Correction.....	61
	Dependence of the Stopping Power on the Medium.....	61
	Mass Collisional Stopping Power Dependence on Particle Velocity.....	62
	Mass Collisional Stopping Power Dependence on Particle Charge .....	62
	Electron and Positron Interactions.....	63
	Mass Collision Stopping Power for Electrons and Positrons.....	64
	Polarization or Density Effect Correction.....	64
	Restricted Mass Stopping Power .....	65
	Linear Energy Transfer and Unrestricted Linear Energy Transfer.....	68
	Mass Radiative Stopping Power.....	68
	Radiation Length .....	70
	Radiation Yield.....	71
	Elastic Scattering .....	72
	Multiple Scattering.....	72
	Particle Range .....	74
	Calculating the CSDA Range .....	75
	Projected Range .....	75
	Practical Range .....	76
	References.....	77
<b>9.</b>	<b>Radiation Equilibrium .....</b>	<b>79</b>
	Fano's Theorem .....	81
	Charged Particle Equilibrium .....	81
	Exposure.....	83
	Transient Charged Particle Equilibrium.....	84
	References.....	85
<b>10.</b>	<b>Absorbed Dose in Media Containing Radioactive Materials.....</b>	<b>87</b>
	Radioactive Decay .....	87
	Alpha Decay.....	87
	Alpha Decay Specific to Dosimetry.....	89
	Dose Rate Calculations for Alpha Decay.....	90
	Beta Decay .....	91
	Beta Decay Specific to Dosimetry.....	91
	Fermi Theory of Beta Decay.....	92
	Electron Capture (EC) .....	94
	Dose Rate Calculations for Beta Decays and Electron Capture.....	94
	Gamma Decay .....	95
	Internal Conversion .....	96
	Some Essential Gamma Decay Theory.....	96
	Absorbed Fraction (AF) .....	97
	Dose Rate Calculations for Gamma Decay and Internal Conversion .....	99
	General Dose Rate Calculations.....	100
	References.....	101

<b>11.</b>	<b>Dose from Directly Ionizing External Radiation Sources .....</b>	<b>103</b>
	Dose in Thin Films.....	103
	1. Dose in Thin Films When $\delta$ -ray CPE Exists.....	103
	2. Dose in Thin Films When $\delta$ -ray CPE Does Not Exist.....	104
	Average Dose in Thick Foils .....	104
	1. Average Dose in Very Thick Foils from Electrons .....	104
	2. Average Dose in Thick Foils from Heavy Charged Particles .....	105
	3. Average Dose in Thick Foils from Electrons .....	106
	Dose When the Electron Energy Spectrum is Known.....	107
	References.....	109
<b>12.</b>	<b>Dosimetry Introduction.....</b>	<b>111</b>
	Characteristics of Dosimeters.....	111
	1. Precision or/vs. Accuracy.....	111
	2. Dose Sensitivity .....	112
	3. Stability .....	112
	4. Energy Dependence .....	112
	5. Angular Dependence .....	112
	Ion Chamber Dosimetry.....	113
	Cavity Theory.....	114
	1. Bragg–Gray Cavity Theory.....	114
	2. Spencer–Attix Cavity Theory .....	115
	3. Other Cavity Theories for Photon Beams .....	122
	Cavity Theory Examples and Discussion .....	124
	Dosimetry Fundamentals .....	126
	Advantages of Media Matching .....	127
	References.....	128
<b>13.</b>	<b>Cavity Ionization Chambers, Circuits, and Corrections .....</b>	<b>129</b>
	Thimble-type Chambers.....	129
	Condenser-type Chambers.....	130
	Parallel Plate Chambers.....	131
	Charge and Current Measurements .....	131
	Charge Measurement Specifics.....	132
	Current Measurement Specifics.....	133
	Density and Humidity Corrections to an Ideal Ion Chamber .....	133
	Ion Chamber Saturation and Recombination.....	135
	References.....	139
<b>14.</b>	<b>Calibration of Ion Chambers and Photon Beams .....</b>	<b>141</b>
	Understanding TG-21 at the NIST Calibration Lab (ADCL) .....	142
	Understanding TG-21 at the Clinic .....	145
	Calibration of Electron Beams.....	149
	Updated Calibration Protocol for Medical Photon Beams (TG-51).....	151
	A Few Key Concepts for TG-51 Calibration.....	154
	References.....	155
